ENERSITE™ SCR12000

ENERSITE Crib Rooms

ENERSITE Crib rooms include all the features of the SWP6000 Services module along with full crib room facilities and ablutions.

These modules are truly self sufficient and provide a full off grid mobile solution for the most remote and harshest locations.

They are not only fully portable and mobile but also have highly reduced operating costs and minimal environmental impact when compared to traditional facilities.

The retractable solar array design provides shade for personnel when extended, will retract for ease of transport and automatically retract on high wind alert.

ENERSITE™ SCR12000

ENERSITE™ SCR12000
